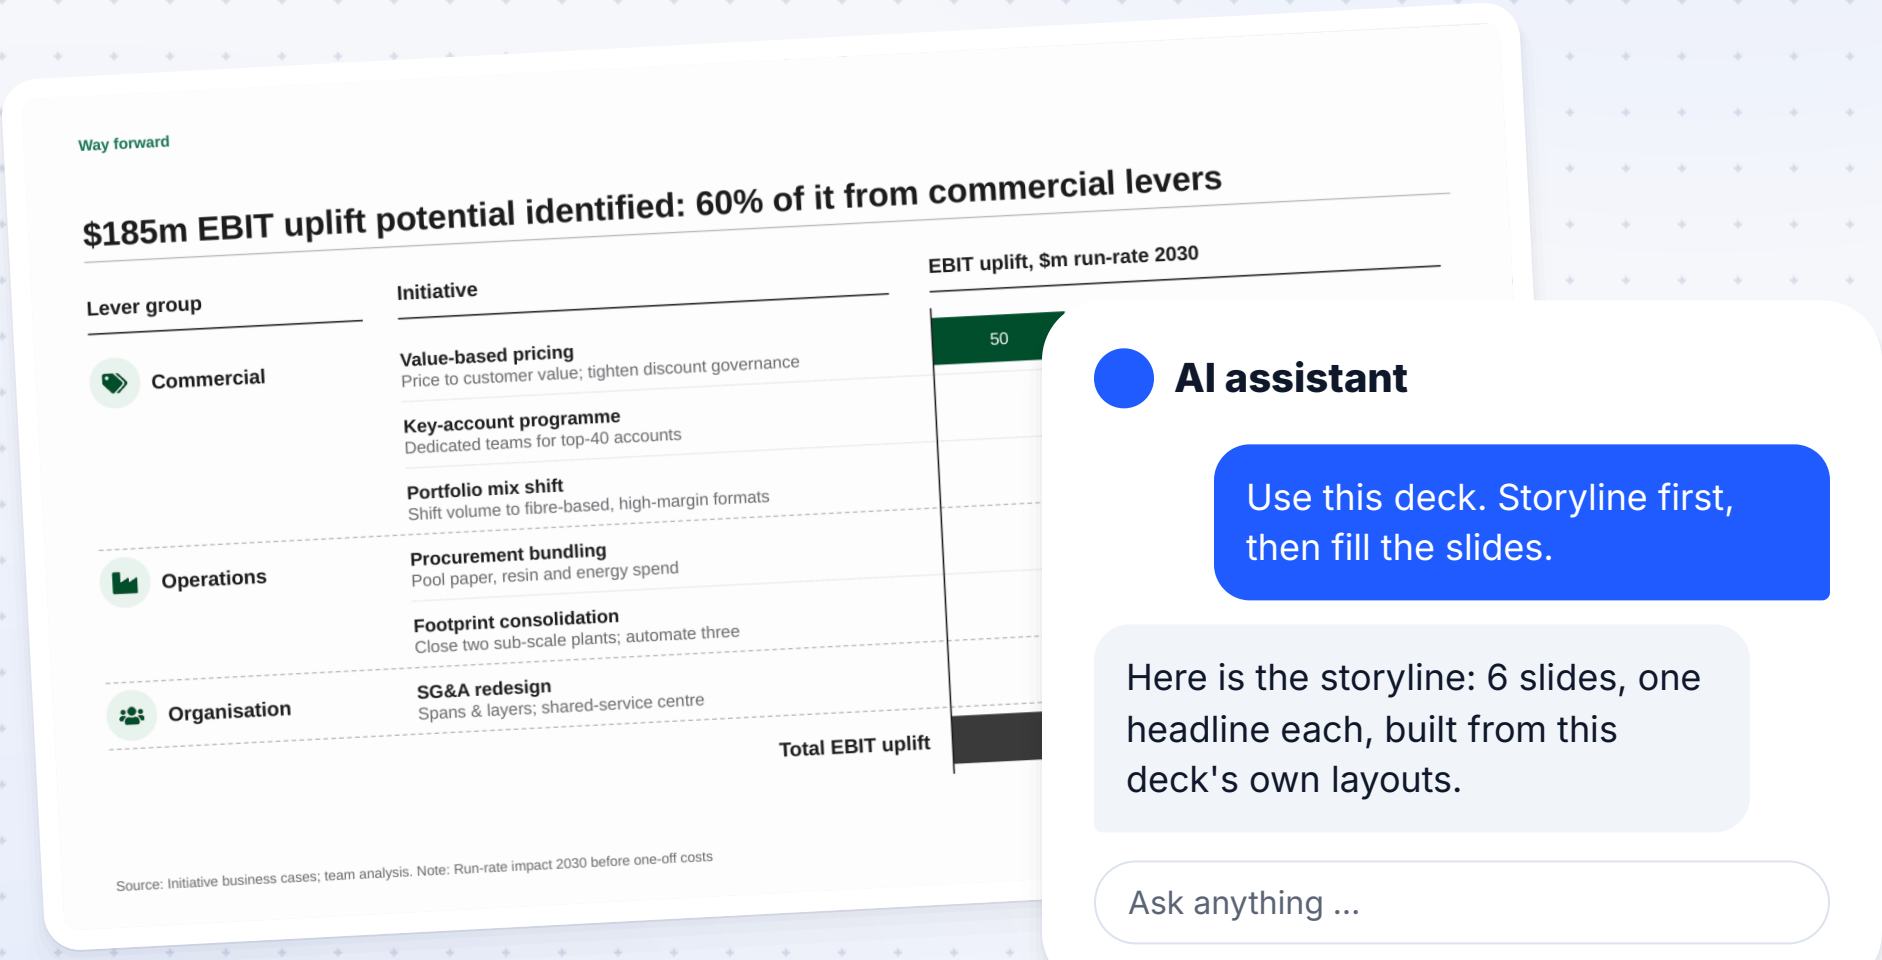
FREE AI PROMPT GUIDE

Make AI build slides that look like yours.

Three steps and copy-paste prompts for any AI assistant in PowerPoint.

3 steps | 4 copy-paste prompts | Any AI assistant



WHY AI SLIDES LOOK GENERIC

AI starts from zero.

Ask an assistant for "a deck on Q3 results" and it has **nothing to build on** and **no rules to follow**. So it invents a design, guesses fonts and sizes, and fills slides before the message is clear.

THE FIX IN THREE STEPS

1. **Start inside a deck that already looks right**
   Give it designs to build on.
2. **Give it clear rules**
   So it fills your slides instead of guessing.
3. **Ask for the storyline first**
   Agree on the message before any slide is filled.

Works with any AI assistant that can work in PowerPoint. **If yours can't edit the file directly,** use the same prompts: it can still write the storyline and the text for each slide for you to paste in.

STEP 1

Start inside a deck that already looks right.

The assistant copies what it sees. Give it a deck with good designs, and it has something to build on.

OPTION A

A good template

Consistent layouts, real charts and tables, theme colours and fonts, like the slidefind toolkits.

OPTION B

Your best past deck

Save a copy and remove confidential content first.

COPY THIS PROMPT

```
Work only in this presentation. Before you create anything, look at the slides and layouts that already exist here. For every new slide, copy the existing slide that fits best and replace its content, or use one of this deck's layouts. Keep the theme fonts and colours. Don't add new layouts, colour schemes or decorative shapes. If nothing in this deck fits a slide I ask for, tell me instead of inventing a new design.
```

Tip: always work in a copy, so your original stays clean.

STEP 2

Give it clear rules.

Without rules, the assistant decides for you: smaller fonts, new shapes, two messages on one slide. Paste these once at the start of the chat.

COPY THESE RULES

```
Follow these rules for every slide in this deck:
1. Keep this deck's fonts, font sizes, colours and layouts. Don't add new ones.
2. One message per slide, written as the headline in a full sentence.
3. Keep every headline to one line. Use shorter words, not a smaller font.
4. If text doesn't fit its box, shorten it. Never shrink the font to make it fit.
5. Don't add shapes, icons, colours or effects. Only fill what is on the slide.
6. Replace every placeholder. Leave no sample text behind.
7. Use only the facts and numbers I give you. Mark anything missing as [to confirm].
8. Ask me before you add, delete or reorder slides.
```

Add your own house rules, for example how to write dates or which terms to avoid.

STEP 3

Storyline first, slides second.

COPY THIS PROMPT

I need a **[number]**-slide deck on **[topic]** for **[audience]**. The goal: **[what they should understand or decide]**. Here is my material: **[notes, data or file]**. Don't build any slides yet. First propose the storyline as a table with one row per slide: (1) the headline as a full sentence and (2) the existing slide in this deck you would reuse for it. Follow my rules. Wait for my approval before you fill anything.

WHAT YOU GET BACK (EXAMPLE)

	HEADLINE	SLIDE TO REUSE
1	Q3 revenue grew 12%, but on-time delivery is behind target	KPI overview slide
2	Three of five projects are on track	Status table slide
3	Delays come from two southern routes	Bar chart with takeaway
4	We ask for approval of two extra relief drivers	Decision slide

THEN FILL THE SLIDES

The storyline is approved. Build it one slide at a time: copy the slide you proposed for row 1, put it at the end of the deck and fill it with content from my material. Follow my rules and check that every text fits its box. Show me the slide, then continue with the next row.

LEVEL TWO

Unlock its full potential.

The **AI Kit** in every slidefind toolkit has two parts:

PART 1

AI brief

Teaches your assistant to think like a top-tier slide designer and gets it up to speed on everything specific to the toolkit.

- **Rules for the details: speaker notes, chart data**
- **Ready-made storylines for common decks**

PART 2

Slide catalogue

Every slide's ID, purpose and limits, so the assistant picks the right slide and fills it to fit.

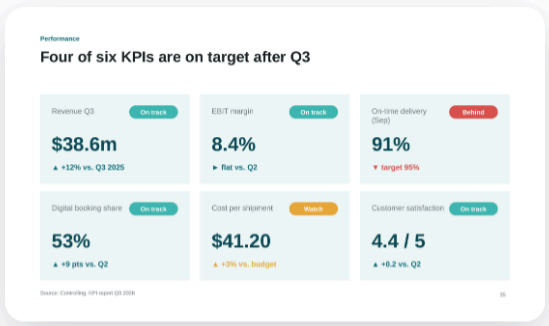
- **A purpose and use cases for every slide**
- **Fill guidance and character limits per element**

ONE OF 410 CATALOGUE ENTRIES: BUSINESS TOOLKIT, KPI TILES

ID **B-UPD-03 · KPI tiles**

PURPOSE Dashboard-style overview of up to six KPIs.

Quarterly business review · All-hands / team update



LIMITS / FILL GUIDANCE

Title	**max. 105 characters · 2 lines**	One headline: the message of the slide as a full sentence.
KPI tile – value	**max. 11 characters · 1 line**	Same style as the example: $38.6m

+ 25 more elements on this slide, each with its own limits

The AI Kit describes all 410 slides like this. Brief + catalogue, ready for your assistant.

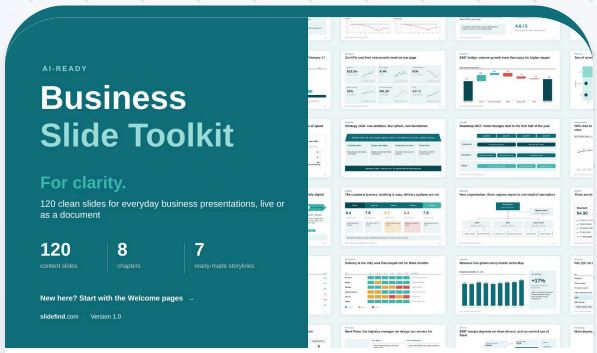
THE SLIDEFIND TOOLKITS

Everything covered, ready for your assistant.

	ON YOUR OWN	WITH A TOOLKIT + AI KIT
A deck that looks right	You find or build one	**410 designed slides in three toolkits**
Design know-how	You explain it in every chat	**An AI brief that thinks like a top-tier slide designer**
Which slide fits	The AI guesses from the look	**Every slide has a purpose and use cases**
Text that fits	Trial and error	**Limits for every text element**
Storyline	Built from scratch	**18 ready-made storylines**

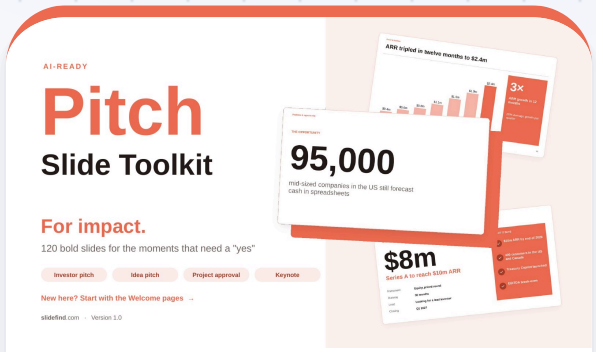
Consulting
For depth.

170 slides · 7 ready-made storylines



Business
For clarity.

120 slides · 7 ready-made storylines



Pitch
For impact.

120 slides · 4 ready-made storylines

Complete Toolkit Bundle

All three toolkits · 410 slides · 18 ready-made storylines
